ISO/PAS17712 Seals

International Standard Organization Publicly Available Specification 17712

What is ISO/PAS17712?

ISO/PAS 17712 (Publicly Available Specification) is a draft International Standard that establishes *"uniform procedures for the classification, acceptance, and withdrawal of acceptance of mechanical freight container seals".*

ISO/PAS 17712 defines the various types of security seals available and describes in detail the general performance requirements for each level of product and includes details of testing specification.

In order to define whether a seal should be classed as **I** (Indicative), **S** (Security), or **H** (High Security) and that it meets C-TPAT compliance; seal must be subject to ISO approved performance tests.

In addition to complying with physical requirements, firms manufacturing or distributing the security seal must also comply with requirements of additional points set out in ISO/PAS 17712

CT-PAT High-Security Compliant Products

Heavy Duty Bolt Lock - Model BLT-1
Steel heavy-duty, high-security bolt seal for trucks and cargo containers.
